

New, More Robust Design

The Molded Case Circuit Breaker Product Line announces improved mechanisms for the Series G[®] EG-Frame Molded Case Circuit Breakers

This includes the Direct (Close-Coupled) and Vari-Depth mechanisms contained in Rotary Through-the-Door kits.

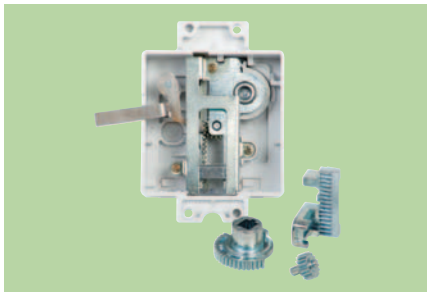

Vari-Depth Design

New metal handle is over three times stronger than the previous, non-metallic version. Also, internal gears are now made of metal.

Direct (Close-Coupled) Design

Gears are now made of metal, not plastic, to eliminate stripping. New offset prevents jamming if the handle is forced.

Style numbers have been superseded as described below. Products ordered after June 1, 2010 will incorporate the new designs. This includes individual mechanisms and complete rotary handle kits.

Vari-Depth Designs

Style # 69D6002G17, 8 mm mechanism, is superseded by 1498D66G17.

Used in High-Performance EG Rotary Handle Mechanism Kits

Catalog Number	Old Style	New Style
8 mm
