

To whom it may concern,

I consider it a pleasure to recommend, and I'm glad we selected, Womack Electric Supply to help us with our energy efficiency project. From the initial audit, until all of the fixtures were installed, they were there; to make recommendations, verify measurements and calculations, and provide documentation. At their urging, we installed samples in a test area. Before investing any resources, we were able to confirm that we would be happy with the resulting changes. In addition to providing a much more uniformly lit facility, the energy division from Womack helped us coordinate with the installer, file and receive our rebate from Duke Energy, and secure the signed documents necessary for the EPAct tax incentives.

By retrofitting and replacing nearly 1,000 fixtures, we are enjoying over 20% more light, at about ½ of the cost of the old system. Our operators are pleased with a better, safer work environment and our maintenance staff is thankful for an easy to maintain, low maintenance lighting system. With Womack's help and recommendations, we've been able to accomplish all of this with a system that will pay for itself in less than a year. In today's economy, finding a project that improves the facility, eliminates future expenses and generates better than a 75% ROI in the first year is rare.
