

Distribution Logistics That Will Make Your Job Easier

Not all suppliers are the same. For contractors, Womack Electric Supply's innovative Central Distribution Center provides tangible benefits: improved flexibility, increased accuracy and the overall cost savings associated with a system that works more efficiently.

Orders Are Filled Faster So You Can Get To Work Sooner

By maintaining a Central Distribution Center, Womack Electric Supply is able to keep big ticket items in stock that others are not.

Fewer Charges For Special Orders Means Better Margins On Special Projects

Our distribution infrastructure allows for many items that would normally be considered a special order to be included in normal shipments. Without extra charges for these parts, you're able to sell more products and keep more profit at the same time!

The Benefit Of More Accurate Orders

Every part from the Central Distribution Center is barcoded and tracked. That means more orders arrive on time

and are correctly packed – an important key to keeping projects on time and on budget. Plus, fewer returns mean everyone can spend their time on more important things.

Improving On The Basics

By consolidating something as essential as wire cutting, we've markedly improved the process. Not only do you get wire when you need it, you see additional benefits (cost savings, flexible delivery) thanks to the efficiency of the process.

Whether your order is fulfilled from the Central Distribution Center or your local branch, Womack Electric Supply's infrastructure is designed to get you the supplies you need faster while still ensuring the health of your bottom line. Ask your Womack Electric Supply representative and learn more about what our Central Distribution Center can do for you and your business.
