Logistics Solutions

Womack Electric Supply Has The Solutions To Simplify Your Project Materials Management

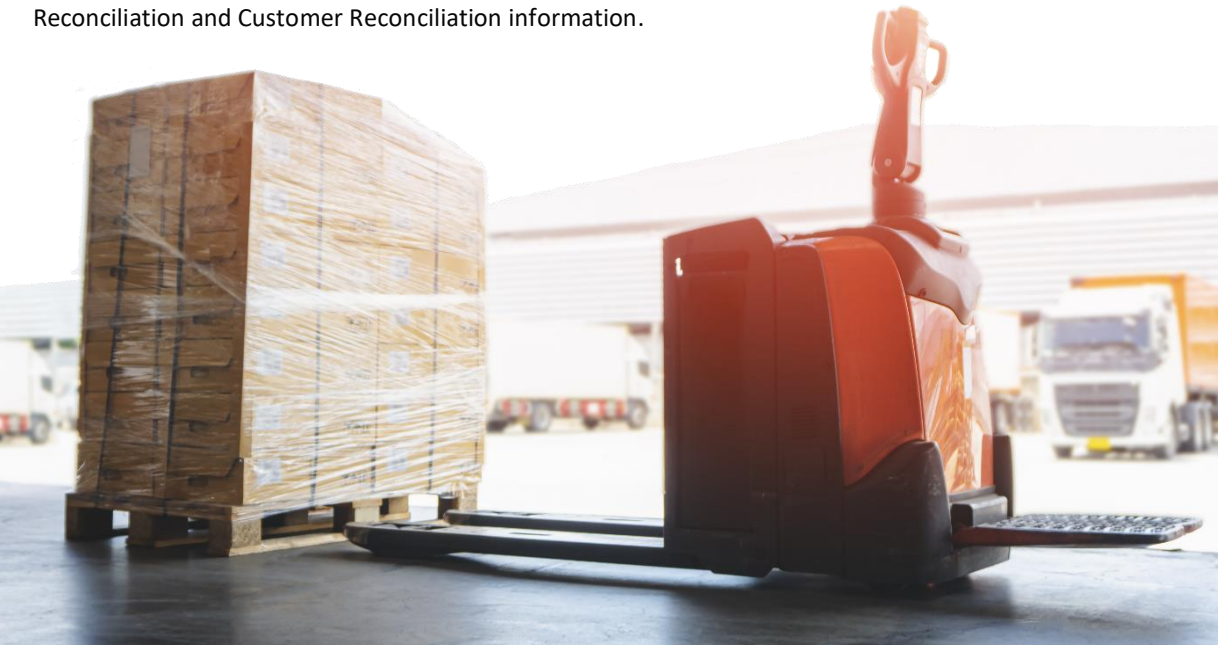

Womack Electric Supply's value-added service of Project Materials Management provides solutions for the warehousing of customer owned materials to manage inventory or provide storage when job site conditions will not allow. Your ordered project materials are shipped directly to one of Womack's Direct Through Stock (DTS) facility warehouses to be received, inspected, stored, and staged until you schedule delivery to your job site.

Benefits To You

- Maintain project construction schedules with early and scheduled material releases as needed.
- Increases organization, productivity, and efficiency at job site by having materials stored until ready for use per project construction timeline.
- Saves time and labor costs by preventing unnecessary re-handling of materials at job site.
- Increased cash flow to start the job by upfront billing for stored material.
- Upon receipt, Womack Electric inspects materials for damage and completes any necessary claims.
- Secure location for materials in a bonded and insured warehouse. Material photos and certificate of insurance available as needed.
- Convenient pre-fab & custom solutions services are also available while materials are in storage.
- Reduces jobsite theft and inventory shrinkage with materials being stored off site until needed.
- Materials are available for shipment upon demand with 72-hour notice of delivery requests.
- Keeps you informed about project materials shipments and status at all times.

Our Project Materials Management services are a part of our Project Services Management Application which provides real-time data reporting for Project Overview, Shipping Status, Change Orders, Project Reconciliation and Customer Reconciliation information.

We Help You Plan, Organize, Direct & Control

MATERIALS STORAGE

Often electrical contractors encounter the majority of their material management problems at the job site. Job site storage that invites handling and re-handling of materials can present a problem in itself. Material tracking, damage, and loss delays are an ever-present concern.

If your job site offers little or no securable storage space for your ordered materials, Womack's Project Materials Management inventory solutions and services can be a solution for you.

MATERIALS STAGING

In the electrical contracting industry, material ordering, and delivery are critical to the successful execution and completion of any project. Materials management can present a number of challenges such as ensuring that ordered products are released for delivery to coincide with project readiness.

Via our Project Materials Management solution, we offer staging services to help you better plan, organize, direct, and control material releases on-schedule.

MATERIALS KITTING

Stored project materials can be kitted before delivery per your project construction specifications by building, floor, units, common areas, etc. You decide. We pack and ship!

Give our Project Materials Management Solutions a try – you'll be glad you did!

See What Our Customers Are Saying ...

"Womack was able to store \$1.3 million worth of fixtures in their staging area. Their team was able to detect defects and handle with the manufacturer and/or logistics company before they made it to the job site. While in storage, a large majority of the fixtures were pre-whipped, making installation a much more efficient process. Fixtures were also delivered on an as needed basis to the job site, which prevented the typical job site storage, damage, and misplacement issues."

Clay Pratt, Project Manager - Bryant Durham Electric Co.

"I quickly came to realize that Womack was not just a "me to" distributor. Womack was able to provide options to allow me to maintain levels of service and keep cash flow steady... which made it possible to have the inventory I needed when I needed it. ...That's a distributor who cares about our success."

Adam Koppin, Raleigh Territory Manager - Ideal Electric Inc.

Additional INVENTORY Solutions

CUSTOMER WAREHOUSE

Critical need and commonly used parts inventory are placed directly into your shop eliminating the need to visit the supply house counter before heading out to the job site. Supplies are billed when used and replenished according to pre-set inventory levels.

SMART CART STATIONS

Mobile supply stations are stocked with your specified products and delivered to your jobsite. Material is billed when used and replenished according to pre-set inventory levels. Smart Carts are great at sites with limited storage, or for use at multi-floored, and multi-phased projects.

REMOTE SITE

Secure material pods delivered to your job site completely stocked with pre-selected inventory. Material is billed when used and replenished according to pre-set inventory levels.

ON-SITE PERSONNEL

Womack personnel working on-site to provide for project materials management.
